PROBLEM STATEMENT : Which model is suitable for Flight Price Prediction

Importing Packages

In [1]:
```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
```

Read the Data

In [35]:
```
testdf=pd.read_csv(r"C:\Users\jangidi veena\OneDrive\Documents\jupyter\test data.
df
```

Out[35]:

	Airline	Date_of_Journey	Source	Destination	Route	Dep_Time	Arrival_Time	Duration	Tot

print(score)
```

```
0.4483619344773791
```

Here when we compare between Decision Tree and Random Forest, we can confirm that Decision Tree has more accuracy than Random Forest which makes it the best model for this dataset. It makes Decision Tree to perform better than Random Forest. But it may vary for the other datasets where in most cases Random Forest performs better as it has reduced overfitting and robust to outliers.

CONCLUSION : Based on accuracy scores of all models that were implemented we can conclude that "Decision Tree" is the best model for the given dataset
